What's new

RH33B

Activate self-confidence

Introducing the RELAX OPTIV ski helmet – the perfect choice for those looking for a combination of innovation, style and maximum functionality. With precisely balanced proportions and a modern design, the helmet delivers not only superior protection, but also comfort you'll appreciate during your day skiing. Thanks to IN-MOLD technology, the OPTIV is extremely light, safe and comfortable. The great shape and sophisticated details ensure that you feel not only protected, but also stylish on every slope. If you're looking for exceptional performance combined with an attractive look, the OPTIV helmet is the perfect choice for any skier.

Activate your style

Style and functionality in perfect harmony! The OPTIV RH33F ski helmet in elegant matt pastel is not only safe and comfortable, but also a great addition to your outfit on the slopes. For the perfect match, combine it with the HTG78D ski goggles in the same pastel colour. A perfect match that impresses not only in appearance, but also in top quality and performance!

Children's concept of Mini Me goggles

Introducing a unique combination of design and functionality in our ski goggles collection that fit perfectly across generations. The women's models impress with their modern look, elegance and precision craftsmanship. The children's versions in the "Mini Me" concept follow the design of the adult models, creating a perfect style match between mom and her little skier. Whether on the slopes or on a hillside full of fun, these goggles will give you and your kids great performance, safety and a sense of style together. Time together on the snow has never looked better!

RELAX

ROP04D

Activate safety

Parents' worries about their children cannot be completely dispelled. The slopes can get busy and you never know what can happen. However, there is one thing we can indulge our children, and especially ourselves, and that is the certainty that they are protected to the maximum. In addition to a properly chosen helmet, we recommend protecting your back with a protector. It will not interfere with children thanks to the use of 3D shock foam.

3D SHOCK PROTECTION

It is a certified protector using the unique features of patented intelligent material 3D SHOCK PROTECTION. It is pleasantly soft and thanks to this it perfectly adapts to the shape of your body. If an impact occurs, the protector immediately solidifies and absorbs the impact energy.

RKH73A3

Refresh your style

Our legendary BAR knitted beanie is back with two brand new, vibrant colour combinations for ladies and gents alike! We're moving with the times and bringing you trends that that won't let you be overlooked on the slopes or in the city. Two vibrant innovations that will simply blow you away.

RKH73A4

Activate the children's world on the slope

Let your little skiers shine on the slope with our new kids' mittens DUMBO. Cheerful pictures of pandas, characters minecraft, icebergs or Japanese squirrels will not only keep everyone warm but also brighten up winter day. A combination of fun and functionality, that will delight your children.

SKI RESORTS SUPPORT? FOR SURE!

Ski resorts are like huge magnets that shine in the winter landscape and leave no one in peace who knows the passion for skiing, snowboarding, or any other activity on the snow.

Once the passion is joined to Relax, it is an optimal combination. Fun may begin! Therefore for us ski resorts are the place to be. We equip rentals and help make every winter a perfect relaxation with lots of passionate sports adventures.

RH24A5

Innovative appearance, more efficient ventilation, magnetic fastening and a spare clear Visor: included. The STEALTH ski helmet with integrated Visor: protects the skier on the slopes by the most modern technologies. Smooth control of all vents ensures perfect air circulation.

TECHNOLOGIE

IN-MOLD SHELL

Extremely light: Relax helmets produced by IN-MOLD technology excel in light weight and are therefore more comfortable to wear. Extremely solid impact resistant core of the helmet is produced by heat and compression molding which leads to inseparable steady component. This technique guarantee strength and flexibility while maintaining high levels of safety thanks to better force distribution while an impact.

HARD SHELL

Extremely resistant: construction HARDSHELL uses solid outer shell with high degree of protection against puncture. Specially designed shell perfectly fits with lightweight molded shock-absorbing helmet's core and thereby provides a compact unit with a long life and high resistance.

I.A.T. SYSTEM

A comprehensive system of internal temperature control combines two unique technologies-system of internal air circulation I.T.C and active ventilation system AIR FLOW.

I.T.C. SYSTEM

Unique air circulation system regulates temperature inside each Relax helmet. System of precisely designed air vents interconnected with air channels integrated into the helmet's core maximizes the flow of air through the helmet and reduces fogging of ski goggles. Fresh air continuously flows through the helmet, cools and automatically regulates temperature inside the helmet.

CROSS PROTECT

Protective brace of hardened polycarbonate on the inside of the helmet increases the resistance of the helmet during side impact and protects the helmet's inner core against mechanical damage.

INTELLIGENT AIR THERMOREGULATION SYSTEM

ACTIVE BOOST

Active ventilation: Smoothly adjustable airflow system with optimally positioned air vents heavily absorbs air which cools the interior of the helmet. It regulates the final temperature and provides high comfort in every situation. With this combination Relax helmets are very well ventilated.

AIRINERGY

Ventilation system with integrated air vents enables optimal airflow. Fresh air dissipates heat and moisture away from the head and thus keeps the head in ideal conditions.

RELAX

RELAX

COMPABILITY & COMFORT

FIDLOCK MAGNETIC CLICK®

FIDLOCK coming from Germany is one of the most innovative brands in the sports industry, focusing on reasearch and development of products based on combination of magnetic and mechanical lock. A patented solution that combines powerful magnets that automatically connect the buckle and a mechanical lock that allows disconnection only if you really want to do so. All products are designed to make life easier for their users.

EASY CLICK

Easy and quick fastening of safety straps under the chin improves the helmet's placing on the head. It reduces risk of helmet's movement on skier's head during impact and thus increases protection of his head.

DUAL FIX

Adjustment fitting system has been developed with a maximal emphasis to compactness of placing the helmet on skier's head. By using DUAL FIX (multiple security fitting system) is achieved a high helmet compactness with skier head which significantly increases overall safety. DUAL FIX control in the back of the helmet is very easy and intuitive.

SOFT SENSE

Shaped antibacterial SOFT SENSE padding provides extra warmth and a pleasant feeling. Soft fleece with SENSITIVE treatment is very pleasant to touch and forms an insulating layer protecting skier's head from chilling.

MULTIVISION

The multi-curved surface of the lens is the most technologically advanced optical element composed of two spherical surfaces. The rounded surface is better adapted to the human eye, eliminates the distortion of the transmitted image and thereby achieving a clean undistorted vision of each skier. Advantage of panoramic MULTIVISION lens is maximum sharpness at all angles of view, a perfect peripheral vision and optical precision.

Stealth

Innovative appearance, more efficient ventilation, magnetic fastening and a spare clear Visor: included. The STEALTH ski helmet with integrated Visor: protects the skier on the slopes by the most modern technologies. Smooth control of all vents ensures perfect air circulation. The MULTIVISION panoramic shield made of impact resistant DURAMAX material with ANTIFOG treatment to prevent condensation of water vapor on the surface of the Visor: guarantees a high level of comfort even in bad weather. Modern Visor: clamping system guarantees easy handling. The lightweight IN-MOLD design of the helmet provides the highest level of protection even in the most demanding conditions. The revolutionary patented safety lock FIDLOCK, which combines powerful magnets with a mechanical lock, allows the disconnection only if you really want to. The helmet is also intended for riders who do not like to wear ski goggles or skiers with optical phrames.

Twister Visor

Very light kids helmet TWISTER Visor: perfectly ensures the safety of your young athlete. High quality design and certified materials guarantee quality and comfort. The construction of the IN-MOLD SHELL helmet uses a hardened, impact-resistant core that is also flexible enough and thanks to a better force distribution system, greatly reduces the impact of the fall. The inner washable SOFT SENSE padding protects your head from being cold. Our multiple security fitting system DUAL FIX ensures maximal compactness of the helmet and head and enhances the already high safety of the helmet.

Optiv

Introducing the RELAX OPTIV ski helmet – the ideal choice for those looking for an innovative shape and modern style. With balanced proportions and innovative design, it offers maximum comfort and protection on every ride. Thanks to IN-MOLD technology, the OPTIV helmet is not only extremely safe, but also lightweight and comfortable to wear all day long. If you want a helmet that combines cutting-edge technology, modern looks and outstanding comfort, OPTIV is the right choice. Enjoy superior performance and a design that not only protects you but also impresses!

Wild Essence

WILD ESSENCE is the bestseller among Relax helmets. With its functional attributes, anatomical shaping and IN-MOLD construction, it is the right helmet for demanding skiers. AIRINERGY ventilation maximizes airflow and automatically regulates the temperature of the helmet's interior. The SOFT SENSE inner lining with antibacterial treatment wicks moisture away from the helmet interior and forms an insulating layer to protect the head from cold.

PARAMETERS

IN-MOLD SHELL

Extremely light: Relax helmets produced by IN-MOLD technology excel in light weight and are therefore more comfortable to wear. Extremely solid impact resistant core of the helmet is produced by heat and compression molding which leads to inseparable steady component. This technique guarantee strength and flexibility while maintaining high levels of safety thanks to better force distribution while an impact.

AIRINERGY

Ventilation system with integrated air vents enables optimal airflow. Fresh air dissipates heat and moisture away from the head and thus keeps the head in ideal conditions.

DUAL FIX

Adjustment fitting system has been developed with a maximal emphasis to compactness of placing the helmet on skier's head. By using DUAL FIX (multiple security fitting system) is achieved a high helmet compactness with skier head which significantly increases overall safety. DUAL FIX control in the back of the helmet is very easy and intuitive.

Wild Lite

WILD is the bestseller in Relax collection. With its functional attributes, anatomical shaping and IN-MOLD construction it is the right helmet for demanding skiers. ACTIVE BOOST ventilation system supported by an unique I.T.C. system of air circulation maximizes airflow and automatically regulates the temperature inside the helmet. The inner SOFT SENSE padding with antibacterial treatment takes the moisture away from the inside and forms an insulating layer protecting skier's head from chilling.

RH17A

PARAMETERS

IN-MOLD SHELL

Extremely light: Relax helmets produced by IN-MOLD technology excel in light weight and are therefore more comfortable to wear. Extremely solid impact resistant core of the helmet is produced by heat and compression molding which leads to inseparable steady component. This technique guarantee strength and flexibility while maintaining high levels of safety thanks to better force distribution while an impact.

AIRINERGY

Ventilation system with integrated air vents enables optimal airflow. Fresh air dissipates heat and moisture away from the head and thus keeps the head in ideal conditions.

EASY CLICK

Easy and quick fastening of safety straps under the chin improves the helmet's placing on the head. It reduces risk of helmet's movement on skier's head during impact and thus increases protection of his head.

Twister

Stylish helmet with robust construction which provides excellent protection either at jumps in snowparks or in freeride. This helmet has everything you would expect, such as AIRINERGY ventilation system which keeps your head dry, and comfortable earpads usable also for listening your favorite music, stylish colour that match to your clothes and much more. TWISTER helmet will become an indispensable accessory as well in as out snowpark.

SKI GOGGLES

Flow

HTG78D

The FLOW ski goggle model is designed with narrower and feminine faces in mind to provide the ultimate in comfort and style. The main feature that distinguishes the new model is the MAGNETIC X-CHANGE magnetic interchangeable lens. Thanks to this technology, you can change lenses in seconds, allowing you to quickly adapt to the current conditions on the slope.

TECHNOLOGY

MULTIVISION LENS

The multi-curved surface of the lens is the most technologically advanced optical element composed of two spherical surfaces. The rounded surface is better adapted to the human eye, eliminates the distortion of the transmitted image and thereby achieving a clean undistorted vision of each skier. Advantage of panoramic MULTIVISION lens is maximum sharpness at all angles of view, a perfect peripheral vision and optical precision.

SOFTVISION LENS

The surface of the lens is rounded at least in one of the two directions. The surface of the lens affects the stream of the beam only perpendicularly to the axis of the lens and the view processing is much easier. To avoid distortion of the view the SOFTVISION lenses are equipped with an optical correlation which sharpens the vision and increases the perception of surrounding objects.

ICE VISION

Optically clear: We put emphasis on optical purity of lenses which has the greatest impact on the real vision. In cooperation with Italian manufacturers and in laboratory environment are produced lenses of the highest quality which eliminate image distortion and transmit the image in the highest quality possible. Integrated heat shield compensates for temperature differences in external and internal environment of goggles and thus greatly reduces the formation of ice on the lens and contributes to the high comfort of the use of our goggles.

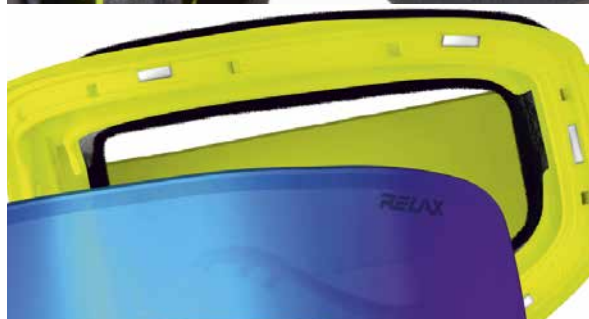

AIR FOG

Unique ventilation system effectively combines active and passive elements of ventilation. The shape and construction of frames is designed for optimal airflow so the moisture is always quickly and constantly draw off and the inner lens is kept dry. The system is fully compatible with helmet's ventilation systems AIR FLOW and ACTIVE BOOST.

ANTIFOG

Technology at which is an invisible layer of nanoparticles applied to the inner lens and thereby preventing condensation of water vapor on the surface and so eliminating fogging. Using this technology maximizes the lifetime of goggles while maintaining high clarity of the lens.

MAGNETIC X-CHANGE

Innovative magnetic system ensures extremely fast exchange and perfect fit of lens in the frame. Replacement becomes very simple and fast, the lens can be exchanged within a few seconds to respond to reduced visibility almost instantly.

CONSTRUCTION

FLEX FIT

Relax ski goggles offer extremely low weight and maximum flexibility. FLEX FIT, unique technology of frames production, significantly reduces weight and FLEX CORE, highly elastic material, ensures maximum flexibility of the frame. Higher level of safety is also achieved by high adhesion of goggles; the frame forms with the skier's face a compact unit and so better absorbs and distributes collision's impacts.

DURAMAX

Certified safe: The material used in the production of lenses is made of impact-resistant polycarbonate especially developed for protection against rough damage. It is by 20% lighter compared to conventional plastic lenses and is maximally safe. The safety is guaranteed by testing in accredited laboratory.

DUAL FIT

The aim of our engineers was to develop an advanced system that would be simple, reliable and functional. For maximum comfort and perfect adhesion of goggles to skier's face we developed the DUAL FIT system. Inserting the strip into the side buckle, uniquely designed for each model, creates a compact unit with the helmet.

ANTISLIP

Anti-slip silicone print on the inside of the strap prevents shifting.

ERGO FOAM

Anatomically shaped foam in the nose area perfectly adapts to the shape of the nose. Goggles better adhere to the face without pressurizing or reducing the comfort.

POLAR FOAM

POLAR foam with a multi-core construction is very soft, cozy and stable. High resistance against impact is achieved by combining unique composition and different density of each layer. The outer microfleece is gentle to the skin, absorbs and takes away moisture from skier's face and provides a high level of comfort.

OTG

OTG foam treatment on the inside of the goggles for a comfortable fit over dioptric glasses.

Lens colours

CLOUD grey
Universal use / Makes your vision brighter / High elimination of reflections
These lenses are suitable for all weather conditions, especially then in bright light. With their soft tone they improve sight comfort in any situation.

BRONZE brown
Universal use / Sharper sight / Reduces eyestrain
These lenses absorb the natural blue light around us and help to sharpen the sight. The BRONZE tone was specially designed to provide greater contrast in low light conditions. These lenses help to reduce the eyestrain.

LUNAR orange
Universal use / Best for sport
Popular colour for any sport activities because of its universality. Lets in greater spectrum of light and therefore is suitable for bright as well as for dark conditions.

ROSE pink
Universal use / High sharpness and contrast
Truly universal colour of lenses suitable for a wide range of light conditions. Pink colour maximizes the depth of sharpness and contrast.

CRYSTAL clear
Ideal for cloudy weather
Total clarity makes it easy to see even in the darkest conditions.

100% UV

All Relax goggles have 99,9% protection against UV radiation A, B, C.

Scoper

From the first glance, the interesting SCOPER ski goggles from the Czech brand RELAX stand out with their clean design, which the designers achieved by absolutely slimming the outer frame. At the same time, it brings a significantly wider field of view, thanks to which your peripheral vision will improve. ICE VISION technology developed in cooperation with Italian manufacturers provides a perfectly clear picture of the landscape and terrain during your descent. The lens is also made of DURAMAX material, so you don't have to worry about easy damage.

Ace

RELAX ski goggles ACE are top ski goggles that are rather of a smaller size suitable for man and women. Flexible material FLEX CORE used during the frame production delivers maximal flexibility and multi-core POLAR FOAM with a skin-friendly microfleece increases the resulting comfort of use. The MULTIVISION panoramatic lens with a rounded shape that copies the shape of human eye provides excellent optical characteristics allowing accurate terrain reading even at high speeds. The non-slip print on the inside of the strap prevents any movement and keeps the goggles firmly on the helmet.

HTG58F

PARAMETERS

DURAMAX

Certified safe: The material used in the production of lenses is made of impact-resistant polycarbonate especially developed for protection against rough damage. It is by 20% lighter compared to conventional plastic lenses and is maximally safe. The safety is guaranteed by testing in accredited laboratory.

Flip

The HTG81 model is the ideal choice for young skiers who want to make the most of all the fun on the snow. The safety double visor made of durable DURAMAX material together with the flexible FLEX FIT frame ensures a perfect fit to the face and high comfort, even in demanding conditions on the slope. The special touch of silver mirror on FLIP models provides better visibility and eye protection even in bad weather. These goggles combine safety, comfort and style to give young skiers unforgettable moments on the slopes.

BACK PROTECTORS

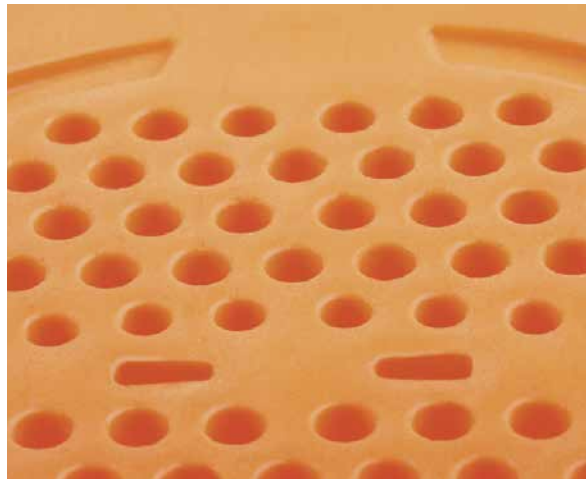

Speedmaster EVO

ROP04C

When developing a revolutionary back protector that is integrated into a comfortable and practical vest with a PRO BELT inner lumbar strap, we have applied the knowledge of design and ergonomics.

TECHNOLOGY

AIR STREAM

Massive integrated AIR STREAM vents provide the best possible airflow control. The passive circulation system effectively removes moisture from the body even during high physical activity, optimizing so the body microclimate.

ANTI SLIP

The silicone anti-slip printing on the inside of the vest helps keep the protector in the most appropriate place, thereby achieving greater ease of use.

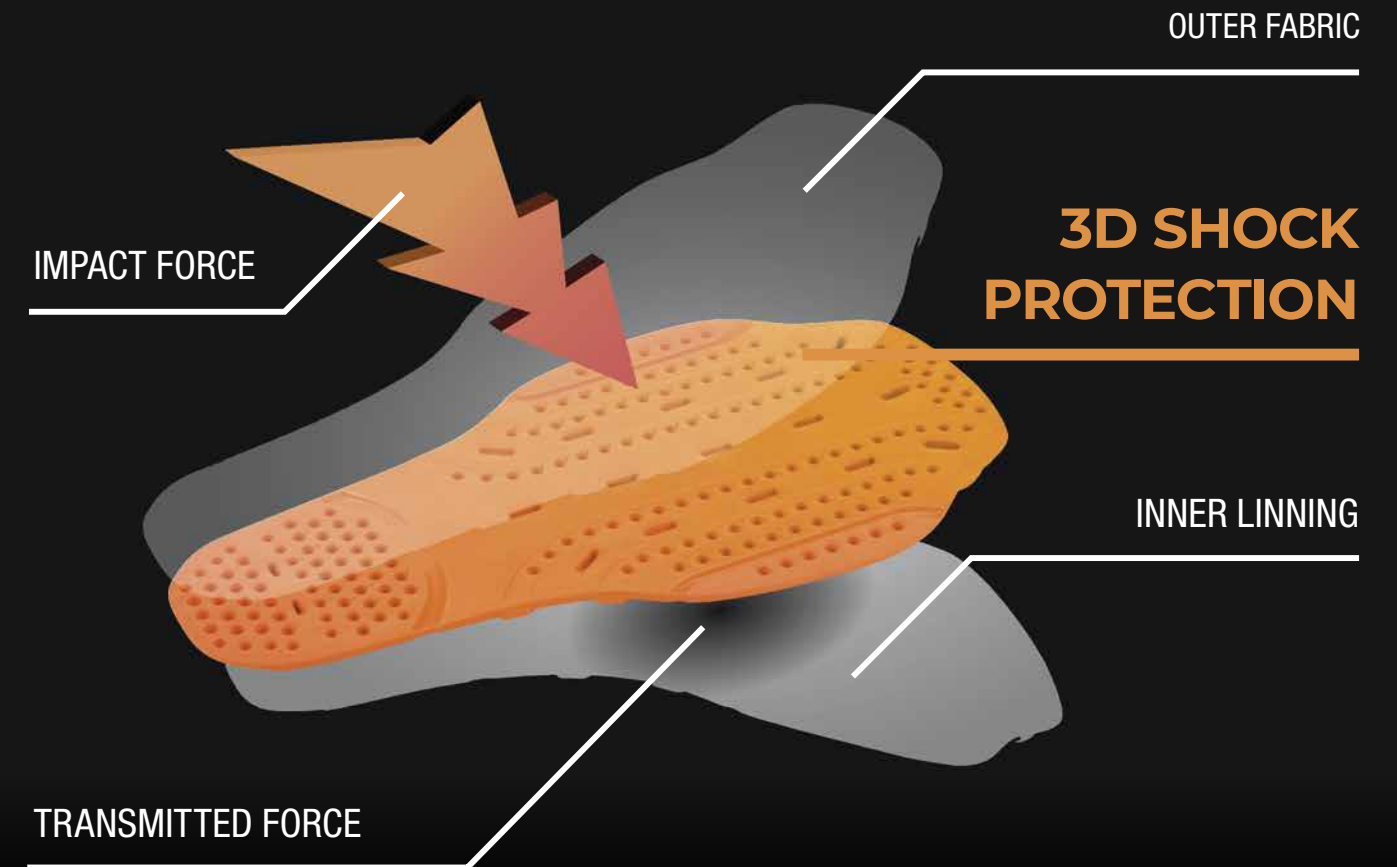

PRO BELT

The integrated PRO BELT made of elastic material and with a Velcro allows precise setting of the back protector and prevents undesired upward movement.

YKK®

YKK, company producing high-quality zippers, has become a world-renowned company thanks to years of experience and a global research and development network. Thanks to the YKK zippers, we can guarantee perfect operation for a long time. YKK supplies products and services with added value that enhance prestige and differentiate the brand.

3D SHOCK PROTECTION

A certified protector using the unique features of the patent-protected intelligent 3D SHOCK PROTECTION material, which, thanks to its softness, perfectly adapts to your body shape, but when it comes to impact, the protector instantly stiffens and absorbs the impact energy.

CERTIFIED QUALITY

All RELAX back protectors undergo rigorous testing and meet the European standard EN 1621-2, which guarantees maximum safety and protection.

Speedmaster EVO

When developing a revolutionary back protector that is integrated into a comfortable and practical vest with a PRO BELT inner lumbar strap, we have applied the knowledge of design and ergonomics. The protector itself uses the unique features of the intelligent 3D SHOCK PROTECTION, which, due to its softness, perfectly adapts to the shape of your body, but when it comes to impact, the protector instantly stiffens and absorbs energy of the impact as reliably as the classic shell spine protector. Massive AIR STREAM vents ensure good ventilation even at high intensity of physical activity.

SKI GLOVES

Puzzy

RR15D

The Relax PUZZY children's gloves are colourful and functional. The constant water resistance and high breathability of the children's gloves is ensured by the AQUA PROTECT technology, which together with the upper material guarantees permanent protection and comfort in adverse weather conditions.

3D-MOTION

Based on the expertise of physicians and testing by professionals we developed 3D-MOTION, an unique ergonomics solution for gloves. In cooperation with leading gloves manufacturer with a long tradition and experience we designed 3D pattern and construction respecting ergonomics of skier's hand. By anatomic shaping copying fingers radius we achieved a natural shape of the glove with high comfort of use. In practice this shaping eliminates some of the annoying problems that can be caused by long-term skiing.

AQUA PROTECT

Relax ski gloves offer lasting protection and comfort in bad weather conditions. Permanent water resistancy guarantees waterproof PU membrane with minimum rating 10000 mm² and minimum breathability 6000 g/m²/24 h.

SOFT LOFT

Insulating SOFT LOFT material with balanced thermal comfort ensures high level of comfort. Using thermal control material composed of elastic hollow fibers which do not lose elasticity, the insulation has optimal thermal properties. By using hollow fibers is achieved so called "loft" effect which in practise provides a better moisture management and high level of heat retention without great weight, even after long use or washing.

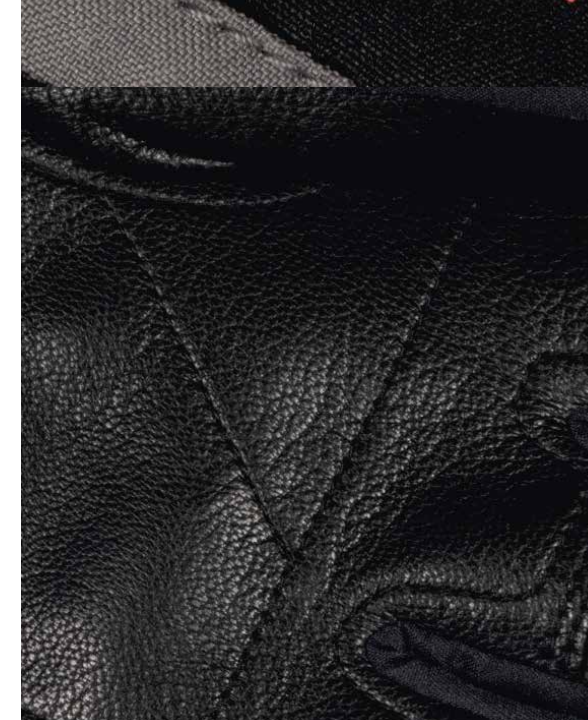

LOOP

Unwanted loss of gloves is a thing of the past. A simple and practical LOOP made from a flexible material that is worn on the wrist and allows you to safely remove the gloves without the risk of losing them.

SOFT PLATIN

Cold, wind or snow, these are conditions that you feel during winter sports. Modern functional SOFT PLATIN material composed of two layers suitable for manufacture of breathable and very comfortable shell layers of clothing will protect you and so you will make the most of your outside activities.

REAL LEATHER

Leather is a natural material with its typical advantages such as strength, flexibility and endurance. Another advantage is that this material adapts well to climatic conditions. It's the most durable material with long lifetime. Used on the palm protects better against damage and improves skier's grip. The maintenance is very easy.

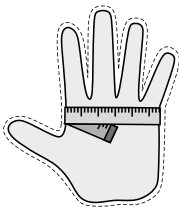

SNOW PROTECT

Very simple and intuitive regulation control method prevents from snow penetration into the Relax glove. It was designed to ensure maximum comfort of use. The regulation is controlled with only one hand. Strong and elastic rubber bands perfectly seal the glove with maximum accuracy. The cuff can be dragged over the jacket's sleeve which ensures secure closure and prevents snow from penetrating the interior of glove even in tough conditions.

Thunder

Men's THUNDER ski gloves with anatomical 3D MOTION shape optimize the palm contact area for greater control of stick control. SOFT LOFT provides excellent breathable insulation while maintaining high thermal comfort. For perfect moisture removal we used high quality AQUA PROTECT membrane guaranteeing water resistance min. 10,000 mm and at the same time breathability min. 6,000 g/m²/24 h. Reinforced protection of exposed areas contributes to maximum comfort.

SKI SOCKS

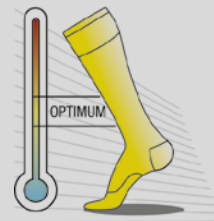

Compress

RS030A

Premium socks Relax COMPRESS for most demanding skiers with light level of compression, which boosts performance, improves blood circulation and accelerates muscle regeneration.

TECHNOLOGY

MICROCLIMATIC

By use of unique combination of functional materials, we have achieved excellent thermoregulatory properties. Socks heat at low temperatures and release heat and humidity at high temperatures. This guarantees the ideal microclimate in the ski boot, the leg does not overheat and is sufficiently protected against low temperatures.

ERGOFIT

Ergonomic design ERGO FIT adapts to individual shape of each leg by exact proportion of elastic material, ensures the sock to hold tight, it all makes the perfect fit. Modern anatomic construction improves the efficiency of socks.

FLEXI GRIP

Comfortable elastic band on top holds the sock firmly/well on the leg due to its high extensibility. It ensures free and confident moving to muscles.

G-FORCE

Shinbone is exposed to the maximum strain. With each curve the pressure changes from the largest to the smallest. G-FORCE's precisely placed enhanced protection has been developed on the basis of knowledge of the forces acting on the exposed areas of the tibia. The protection structure recovers energy, supports stability and performance.

KICKER

Spot amplification in the instep area effectively distributes the pressure and supports the sock stability on the foot, improves the shock absorption. During intense exercise protects the instep bone against bruising.

PRO PAD

Extremely stressed parts include also the ankle. The softened part located in the delicate area of the ankle effectively reduces friction, minimizing the incidence of bumps without limiting the movement.

WRAP-X

Using a reinforced construction and durable materials in the sensitive area of the Achilles tendon, we created a protection for one of the most vulnerable parts of the legs.

L/R ANATOMIC

Anatomic design for left and right leg allows the precise placement of protective and supportive zones. It contributes to the ideal ergonomics of the sock and ensures maximum comfort.

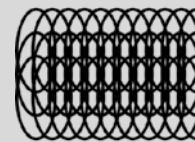

SOLE PAD

Heels and fingers deserve special treatment. Durable polypropylene with soft padding on exposed areas of the foot enables perfect thermoregulation properties and provides excellent protection to the foot against bruising during the excessive physical activity.

MERINO

MERINO wool is lighter, finer and more comfortable to wear than common wool. The natural properties of MERINO wool do not compare to any other material. However, it retains the positive characteristics of conventional wool like fast absorption of moisture, breathability and the ability to heat even in the wet state. In the summer it cools, warming in winter. Even with prolonged use, it can prevent bacterial growth and prevent odors.

TERRY

Kids socks must contain the best of socks for adults, while respecting the fact that they are worn exactly by children. The fact is that child's body is not processing the thermoregulation as well as an adult, that is why we tend to dress children more warm. For kids and juniors, we thought about this specifics and used very comfortable TERRY textiles with raised uncut loops of thread covering both surfaces, which create so-called air pockets and thus keep the foot of a small skier in pleasant warmth.

CORDURA®

Highly durable technical material made of polyamide yarns, which extends the life of the socks while leaving them breathable and lightweight. This material perfectly protects against unpleasant rubbing inside the shoe, thus contributing to greater wearing comfort.

Q-SKIN®

Q-SKIN® is a polyamide 6.6 fibre in which silver ions are inserted directly during the spinning process meaning that it limits bacterial growth preventing body odor. Q-SKIN® takes care of the skin, providing its wearer with breathability, freshness, hygiene and comfort. Proven bacteriostatic effectiveness as certified by the MIS PLUS Institute of Zürich according to DIN ISO 20743 standards: 10-2007. Stands up to repeated washing as certified by the MIS PLUS Institute of Zürich according to JIS L 1902/02 standards.

SENS TO SEAM

Flat seams reduce the risk of blisters forming during intense exercise.

Mountain

RELAX presents the MOUNTAIN socks, combining technology and design. Made largely of natural materials for optimum comfort and durability thanks to SOLE PAD technology. The ergonomic design and organic cotton composition ensure not only superior style but also support foot health. With G-FORCE tibia protection, we add an extra layer of safety and comfort. With MOUNTAIN socks you will reach the pinnacle of success!

Nordic

Highly efficient cross-country ski sock NORDIC with a combination of Merino wool and functional materials ensures a stable warmth at low temperatures, also provides an excellent thermoregulation by using MICROCLIMATIC technology. The sock is anatomically shaped for right and left leg, thereby allowing precise placement reinforcements in exposed areas. Instep protection is provided by KICKER spot technology, which decomposes excessive pressure and thus protects the cranial bones during impact. The elastic bandage in ankle area securely protects it and thus supports the natural movement of the foot in the boot.

WINTER BEANIES

Tambora

RKH227C
RKH228C

Brighten up your wardrobe with our colourful TAMBORA beanies and tunnel combinations. Melier yarn in lovely colour combinations creates a glamorous effect and adds a unique style to these pieces.

TECHNOLOGY

POLYACRYL

Fine elastic fiber was especially developed for increased protection against hypothermia. Material made from this fiber excellently resists weather conditions, is fouling resistant, does not shrink and is easy to wash. Fiber has natural protection against microorganisms. With its benefits the material is very similar to wool.

FLEECE

This material has very good thermal insulation characteristics. The fleece is very soft and pleasant to touch. Indisputable advantage of this material is that it preserves the feeling of dryness. The fibers structure increases the moisture transfer, unlike natural materials it does not absorb the moisture but only transfers it to the upper layer and therefore remains dry on the surface.

MERINO

Merino wool obtained from specially bred Australian sheeps is natural fiber with excellent natural thermal insulation characteristics protecting against hypothermia. Thanks to the unique composition of the wool fiber the material is able to absorb moisture in the equivalent of up to a third of its weight without being wet on the touch and therefore the wool warms even if moist. Merino wool has a natural ability to withstand without odour for a long time even after a prolonged use. In addition in the sun provides high protection against UV.

SWAROVSKI

SWAROVSKI is the premium brand for the finest crystal jewelry since 1895. It is recognized for its innovative excellence and its cooperations with top fashion, jewelry and accessories designers are known worldwide. Crystal clear and shiny rhinestones can be found in some models of knitted Relax beanies, always bearing SWAROVSKI Elements label.

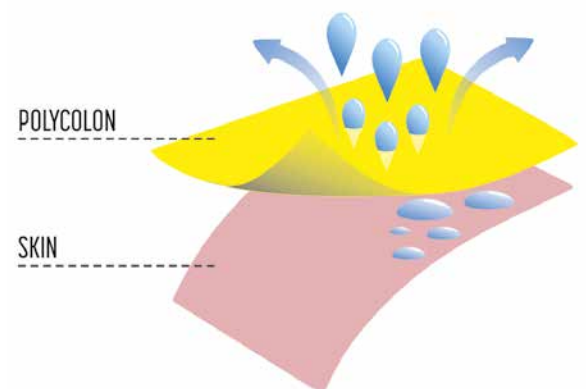

WOOL

Thanks to its thermal insulation characteristic the wool is often used in the production of modern insulating layers of clothing. The wool has a high absorbency and elasticity, however the greatest potential is in its immediate insulating characteristic which you will mostly appreciate when you need quickly to warm up. This characteristic is determined by the structure of individual fibers between which there are small air pockets which create a perfect insulating effect. Wool fleece thicker than 34 microns can absorb a lot of moisture, warms in cold as well as in wet conditions.

DESIGNED IN CZECH REPUBLIC

The RELAX brand is based on designing products in the Czech Republic. We rely on local talent and know-how to create quality and innovative products with unique design, focused on the needs of the market. Our goal is to combine traditional craftsmanship with modern trends, providing customers with a unique and functional experience.

POLYCOLON

Functional hydrophobic fibers made from polypropylene Meraklon yarns. Material made from POLYCOLON fibers excels in sophisticated moisture management, the fiber does not absorb the moisture, it takes it away and passes it to the outer layer where it evaporates. It has very good thermal characteristics and is up to 40% lighter than cotton. POLYCON keeps dirt away, is suitable for extreme conditions with high emphasis on heat and drought.

OEKO TEX

International certificate "Confidence in textiles" guarantees that during the production the environment was not exposed to toxic chemicals and that your skin will not be exposed to it as well. Certified products meet high quality standards and all prescribed norms protecting customers and the environment.
